

# **General Information**

Please note that the following installation conditions must be obeyed:

- Pressure Requirement: PN16.
- Environmental Class: E1, M1
- Installation requirement: There must be a distance of minimum 25 cm between signal cables and other installations
- If medium temperature is below 10°C or above 90°C in flow sensor, It's recommended that the calculator be wall-mounted.

UTM22 Ultrasonic BTU/Heat Meter

Installation & User Guide Manual

# Key Information:

Flow Sensor	Registers the amount of district heating water in m³/h circulating through the heating system. ⊖: 3°C~150°C			
Temperature Sensors	Placed in forward and return pipes sense the cooling, by the difference between in flow and out flow temperatures. $\Theta$ : 1°C~150°C			
Calculator	Calculates heat/cold energy consumption based on flow volume and temperature loss of heating water. $\Delta \Theta$ : 3K~95K			
Electromagnetic Environment	E1 (housing/light industry). The meter's control cables must be drawn at min. 25 cm distance to other installations			
Mechanical Environment	MI (fixed installation with minimum vibration)			
Climatic Environmen	The meter must be installed in environments with non- condensing humidity as well as in closed locations (indoors). The ambient temperature must be within 5~55C°			
Maintenance and Repair	The district heating supplier can replace temperature sensor and battery. The flow sensor must not be separated from the calculator. B12 VI-B Series must be connected to a temperature sensor pair type Pt1000.			
Battery for Replacemen	B12 VI-B Series can be fitted with ER18505 or ER26500 with operating time of 6/10/15 years replaceable.

## The main consist unit of UTM

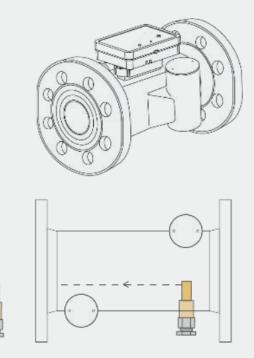

Ultrasonic Flow Metering Unit: Ultrasonic flow meter measures by the transfer of ultrasound signals between transducers with the help of mirrors.

Temperature Metering Unit

PT1000 type BTU/Heat sensors are used which they arecalibrated, certified. If input water temperature metering prob is integrated with the meter body where flow meter is, thus the output water temperature metering prob is mounted to a suitable point on the network return water direction. Also meter could be installed in out flow position.

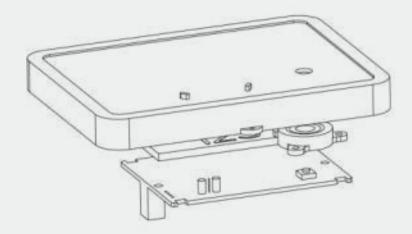

Default cable length is 1.5m, but 3m length is also available as per request.

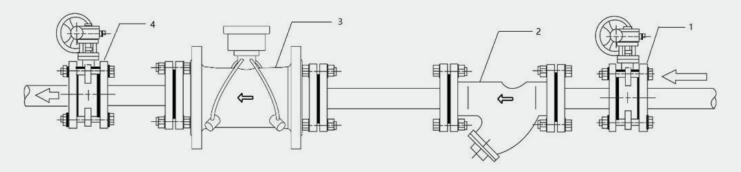

## **Calculator Unit**

It is the unit that process energy calculation by the flow rate data received from flow rate metering unit and temperature data received from temperature metering unit. Its calibration is performed in software at factory. Calculated energy and other information is displayed on the LCD when button is pushed. These information may be remotely read via optical port and communication unit.

#### Installation

# Installation Diagram:

No.	Description
1	Valve Inlet
2	Strainer
3	Water Meter
4	Valve Outle

#### Requirements for installation environment

UTM Series has been designed for indoor installation in non-condensing environments with ambient temperatures from 55~5°C.

- The meter must not be under any mechanical stress when installed in the pipe. The meter must be protected against pressure shocks in the pipe.
- Protection class IP68 allows long-term submergence, provided that all cable unions have been correctly mounted and that the plastic cover has been properly fastened.
- I Make sure the meter is installed sufficiently far away from possible sources of electromagnetic interference (switches, electric motors, fluorescent lamps, etc.)
- All control cables must be drawn separately and not parallel to e.g. power cables or other cables with the risk of inducing electromagnetic interference. There must be a distance of min. 25cm between signal cables and other installations.
- If two or more meters are to be installed shall be in parallel, the axis-center distance between two meters shall be at least 135mm minimum.

#### **Before Installation**

The pipe must be completely cleaned before installing the ultrasonic BTU/Heat meter to prevent the debris from damaging the BTU/Heat meter. Ultrasonic BTU/Heat meter is an expensive precision instrument. Care must be taken when transporting.

It is forbidden to directly lift the meter head or sensor line; it is strictly prohibited to approach a higher temperature heat source (such as electric welding to prevent battery explosion and injury and damage to the instrument). The installation position of the ultrasonic BTU/Heat meter should pay special attention.

The BTU/Heat meter should be avoided to be installed at the upper end of the pipeline (there will be bubbles in the pipe), avoiding installation near the elbow (which will generate vortex flow), and should be kept away from pumps and other equipment (which will cause pulsating flow); The connecting pipe at the upstream and downstream of the ultrasonic BTU/Heat meter

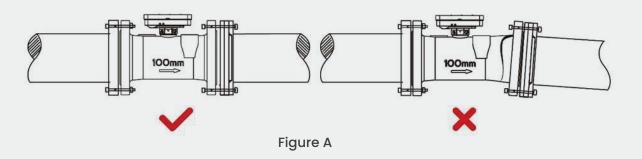

shall be the same as the diameter of the BTU/Heat meter and shall not be reduced in diameter. The direction indicated by the arrow on the surface of the ultrasonic heat meter is the direction of heat flow and shall not be reversed.

It is recommended that the front end of the ultrasonic BTU/Heat meter be equipped with a strainer the corresponding diameter; the valve is installed in front of the meter and it can be separated from the meter body for future maintenance and repair.

#### Common error installation

If the flange on the pipe is welded, the position reserved for welding is too large, or the unevenness of the flange welding has an angle with the flange of the meter.

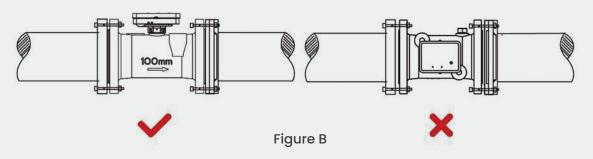

Do not forcibly tighten the bolt now otherwise the body may be broken. The correct approach should be removed and reinstalled (as shown in Figure A).

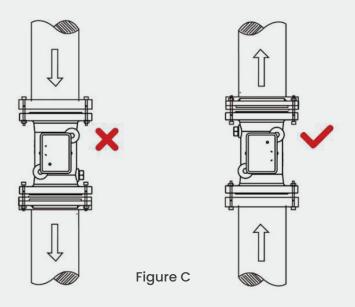

When the meter is installed horizontally, the direction of the calculator should be upwards. If the direction of the calculator is facing to the side, the two transducers will not be on one level, and the transducer at the high point may collect air.

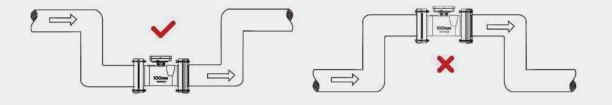

The measurement is not accurate or not measure (as shown in Figure B).

When the meter is installed vertically, it must be installed on the straight pipe with the heat flow upwards. Because the pipe with the downward flow of heat is affected by the gravity of the center of the earth, the heat in the pipe cannot be filled. This may result in inaccurate metering or even cause the meter don't measure (Shown in Figure C).

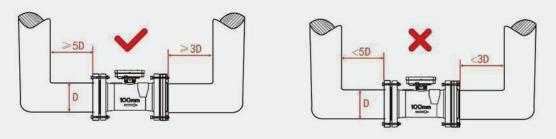

When installing at the "U" tube, install the meter at the lowest position, because the pipe may accumulate air in the high place, causing the meter to be inaccurate or not measure. (Shown in Figure D).

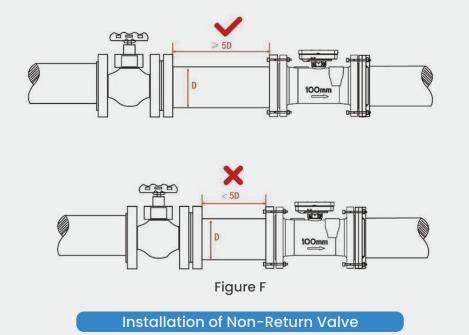

When the meter is installed at the elbow, it must be ensured that the distance between the front straight pipe is ≥5 pipe diameter and the rear straight pipe is ≥3 pipe diameter. Otherwise, the meter may not measure (as shown in Figure E)

When installing values or other objects in front of the meter, it must be ensured that there is a distance of  $\geq$  5 times the diameter between the meter and the object, otherwise the meter may not be metered; (as shown in Figure F).

The meter can be supplied with a non-return valve (if required) on request. The non-return valve must be installed on the heat inlet end of meter when installing.

## After the installation

The tightness must be proved by pressurizing with cold heat, slowly filling the pipe on completion of the installation. Open the shut-off valves carefully and check installation for leakage. While the piping system is operating, check whether the volume display correctly and the temperatures display corresponding with the actual temperatures (see the display information). When the response thresholds are exceeded and the flow rate is positive, the volume is sum-mated. Make the segment test, in order to displays all display segments for test purposes. The operating hours are counted from initial connection of the battery. The date is incremented daily. As a standard the meter is delivered with the local time, or destination time if required.

#### POWER SUPPLY

UTM Series can be fitted with one ER18505 or ER26500 with operating time of 6 or 11 or 15 years respectively.

Brand	EVE			
Туре	Lithium Battery			
Model No.	ER18505 ER26500			
Rated capacity	4000mAh 8500mAh			
Rated voltage	3.6V			
Max recommended continuous	130mA 150mA			
Max pulse current	180mA 300mA			
Reference weight	28g 52g			
Max dimension	18.7×50.5mm 26.2x50mm			
Operating temperature	-55°C $\sim$ +85°C			

Interface & Communication

## Optical port:

UTM Series are all equipped with an optical interface IrDA to IEC21-62056 as a standard. In addition, one of the following options can be ordered for remote output.

## M-BUS:

Cable: connected with galvanic isolation Voltage: 50V max.

Current: M-Bus loads Addressing: primary or secondary

Note: A higher frequency is not allowed and may result in meter malfunction! Data transmission in the compatibility mode (= standard, one data frame) or in the full mode (3 data frames) possible.

If the meter is equipped with "M-bus", it is delivered with a two-wire cable, which can be lengthened with a cable 2 x 0.75mm2 (put a distributing box). Pay attention to the proper polarity in case of the pulse output. If the meter is read out via M-bus, the allowed mean frequency of reading must not be exceeded. Any more reading is not allowed and may result in a damage to meter. The M-Bus or pulse variant of the meter is supplied with a 2-wire cable with wire end ferrules.

Version/Color	Pulse	M-Bus (2-wire)
Red	Pulse	M-Bus
Black	GND	M-Bus

## Pulse Output (Optional)

Pulse output for heat or volume, with 2m cable connected, with galvanic isolation Pulse significance: 1 pulse per kWh, 1 pulse per 100 liter or 1 pulse per 0.001 Gcal Pulse length: 100 ms (Programmable) Heat / Volume: specify in order or change with service-software Voltage: max. 30 V Current: max. 30 mA Pulse break: min. 25ms Classification OC (acc. to EN 2-1434) Voltage drop: ca. 1.3V at 20 mA

## RS-485(Optional)

Cable: connected with four-core cable. Voltage: 24-5V.

Version/Color			RS-485		
Red			VCC		
Black			GND

## Operation & Display

UTM Series is fitted with an easily readable LCD, including 8 digits, measuring units and information field.

Fig.I LCD Full Display

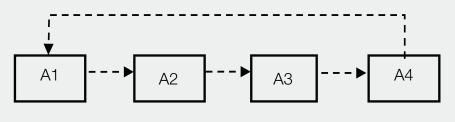

No.	ICON	Name	Meaning
1	▼	Calibration mode	Under calibration
2	Л	Pulse	Pulse output
3	Ñ	Low battery warming	User is reminded to replace the battery with a new one.
4	Δ	Error warning	Warnings for error
5	*	Heat	Accumulated heat consumption
6	*	Temperature of inflow water	Accumulated cold consumption
7	<b>₽</b> ₽	Temperature of in/outflow water	Water temperature in/return pipe

#### Operations on how to display

Users may press the button to read the meter information such as Accumulated volume, current flow rate, water temperature, etc. The following information is displayed in order by shot pressing the button: temperature in, temperature out, temperature difference, instant flow rate, cumulative flow volume, instant heat power, cumulative hear consumption , date, time, continuous working time, meter ID, software ID, type ID, M-bus address, etc.

#### Menu List (user loop)

Pressing the button for 2 seconds and holding it on will bring up the four menus for users to select.

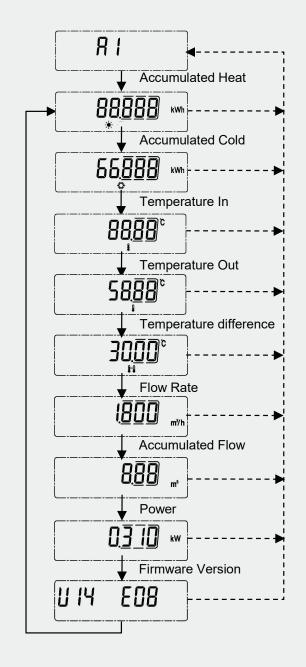

---- ► Keep press more than 2 seconds

## Menu Al

Shortly pressing the button to display items under Menu A1 one by one in the following order to check the measurement data:information field.

- Short active less than 2 seconds
- -----

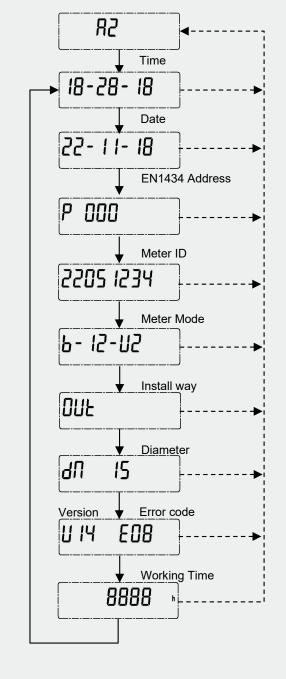

Keep active more than 2 seconds

12

## Menu A2

Shortly pressing the button to display items under Menu A2 one by one in the following. Order to check the meter information.

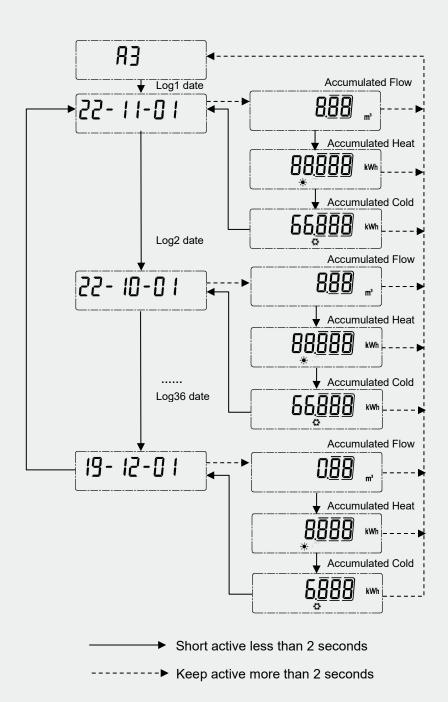

Despite all attempts to guarantee accuracy in this specification,Neo Wave cannot be held liable for any damage injury, loss, or expense due to errors or omissions. Product specification and design might change without prior notice in pursuit of technical enhancements.

## Menu A3

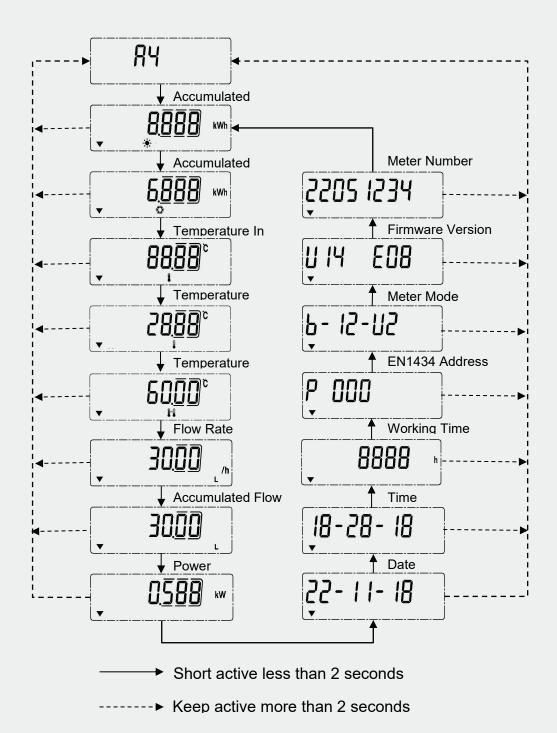

This Menu shows history date records of last 36 months. Click the button to select the month, then the month, monthly flow and monthly heat consumption will be displayed in turn.

## Menu A4

The content are similar to Menu A1, but for calibration only. The following diagram shows Menu A4

#### Monthly Data

The calculator stores the following values for 36 months at each end of month

- Volume (meter reading)
- Heat Energy (meter reading)
- Cold Energy (meter reading)

From the month set day display, press the service button for 2s to enter the previous month's values.

The month values can also be read out via the optical interface.

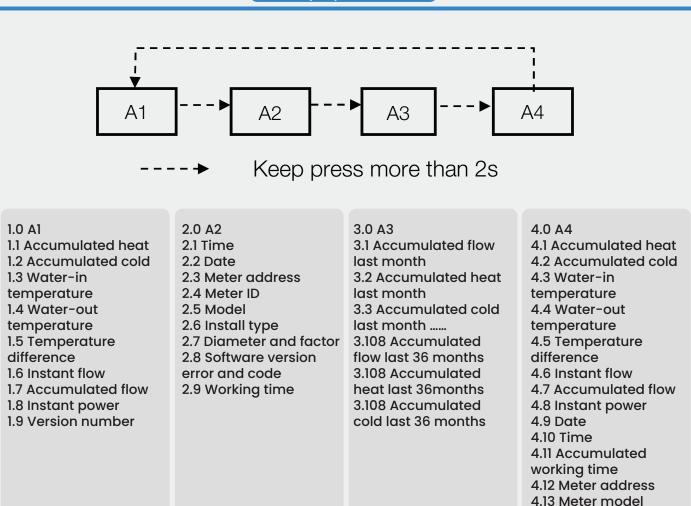

Fig. Display Structure

4.14 Software version

4.15 Meter ID

#### Error And Warning

## **Error Display**

The meter constantly performs self-diagnosis and can display various faults. Visual indication on the LCD display in the event of an error.

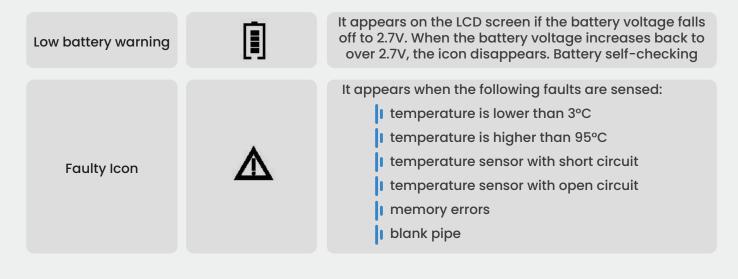

Error code	Meaning	How to handle the error
E01	Low battery	Contact service
E08	Empty pipe	Check the pipe if stop water supply or the meter in storage
E09	Low battery + Empty pipe	Contact service
E40	Temperature is lower than 3°C	Check the storage temperature
E41	Low battery + Temperature is lower than 3°C	Contact service
E48	Empty pipe + Temperature is lower than 3°C	Check the storage temperature
E49	Low battery + Empty pipe + Temperature is lower than 3°C	Contact service

Warnings

Permanent visual indication on the LCD:

Fault / failure of ultrasonic or temperature measurement

- Low temperatures (below 3 °C)
- Air in the measuring path, no volume measurement
- Low battery Warning Icons:

16
